Opportunities

Are there activities that you would suggest for helping to support the fish in the Thames? Are there ways that we can involve the public in improving the health of the fishery?

If you would like to be added to our contact list and receive summaries of the workshops and notices of upcoming meetings, please provide your contact information.

TRFMP Public Workshops - Questionnaire

The Thames River and its tributaries are home to a wide variety of fish species, each of which plays an important part in this ecosystem. A Fisheries Management Plan is a resource document that provides background information about the historic and current fish community and about physical conditions within the watershed. The plan is used to set management directions for the fish community, the fish habitat, and human use of the resource.

By filling in this questionnaire, you are helping us to develop a more accurate understanding of the fish community in your area.

If you don't have an opportunity to fill out the questionnaire at one of the public workshops, please return it to:
Teresa Hollingsworth, Upper Thames River Conservation Authority
1424 Clarke Road, London, Ontario N5V 5B9 (fax: 519-451-1188) Thank you!

Resource

What can you tell us about the river and the fish as a resource in your area, in your experience? Over time, have things changed? How? To ensure that we know what area(s) you are referring to, please identify the location(s) by referencing the maps by **management zone**, **grid**, and **watercourse name**. The maps will be posted at www.thamesfishplan.ca

Issues

What do you think impacts the health of the fish in the Thames? What do you see as the biggest challenges facing the future of the fish of the Thames?

Plan

What would you like to see the fisheries management plan accomplish? What would signal to you that the plan has been a success? Are there questions that the plan should endeavour to answer?
